APPLICATION AREAS

Flat roofs

- Cold roof
- Warm roof
- Green roof
- Photovoltaic systems

Balconies and terraces

- Kitchen sealing
- Floor heating
- Plumbing units

WATER UNDER CONTROL

Detect moisture and stagnant water at an early stage. With HUM-ID's sensors and scanners.

INGENIOUSLY SIMPLE. SIMPLY INGENIOUS. PROVED AND TESTED FREQUENTLY.

FIND MOISTURE & LEAKAGE

INCREDIBLE FAST AND RELIEABLE

- ▶ Control your roof while walking over it without having to open it.
- ▶ Check the status of the sensors through all layers and loads.
- ▶ Save every inspection round for each of your sensor roofs automatically.

With the handy Hum-ID Roof Scanner **1** the cable- and battery-free Hum-ID sensors **2** are read out via RFID.

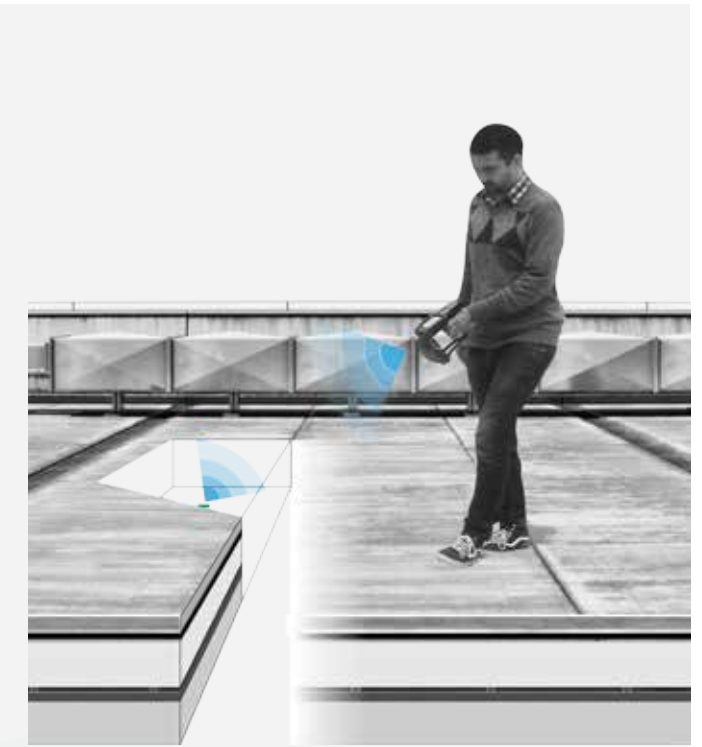

THE INDUSTRY STANDARD

PROTECT, CONTROL, REACT

- ▶ Hum-ID is rated as the proof for impermeability for building companies and processors.
- ▶ With Hum-ID it is possible to detect permeated water already during the construction phase.
- ▶ The log function allows for the evidence that the roof is leak-proof at the time of measurement.

Certainly no false alarm: Only Hum-ID can distinguish permeated water from "natural" condensation.

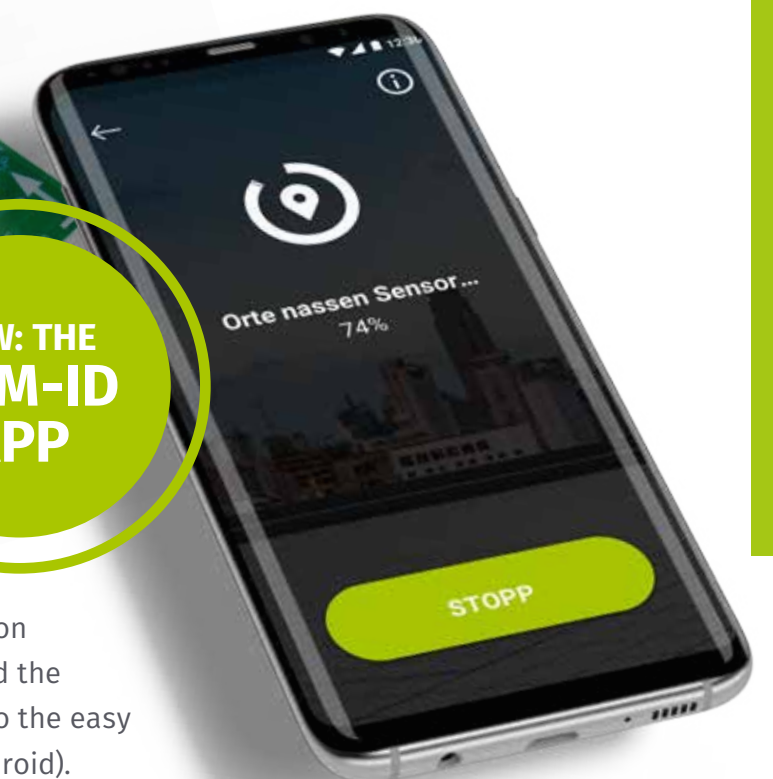

- ✔ Avoid use and production losses
- ✔ Minimize the property's vulnerability to renovations
- ✔ Reduce operating costs

Profit from the many financial advantages of the integrated roof control system and contribute actively to the value preservation of your property.

NEW: THE HUM-ID APP

In combination with the smartphone extension HD EXA your mobile can read the sensors and the best roof scanner we've ever made. Thanks to the easy to use HUM-ID app (available for iOS and Android).
